The Story Grid Mar 18 2022 WHAT IS THE STORY GRID? The Story Grid is a tool developed by editor Shawn Coyne to analyze stories and provide helpful editorial comments. It's like a CT Scan that takes a photo of the global story and tells the editor or writer what is working, what is not, and what must be done to make what works better and fix what's not. The Story Grid breaks down the component parts of stories to identify the problems. And finding the problems in a story is almost as difficult as the writing of the story itself (maybe even more difficult). The Story Grid is a tool with many applications: 1. It will tell a writer if a Story ?works? or ?doesn't work. 2. It pinpoints story problems but does not emotionally abuse the writer, revealing exactly where a Story (not the person creating the Story'the Story) has failed. 3. It will tell the writer the specific work necessary to fix that Story's problems. 4. It is a tool to re-envision and resuscitate a seemingly irredeemable pile of paper stuck in an attic drawer. 5. It is a tool that can inspire an original creation.

Applying Quantitative Bias Analysis to Epidemiologic Data May 28 2020 Bias analysis quantifies the influence of systematic error on an epidemiology study's estimate of association. The fundamental methods of bias analysis in epi- miology have been well described for decades, yet are seldom applied in published presentations of epidemiologic research. More recent advances in bias analysis, such as probabilistic bias analysis, appear even more rarely. We suspect that there are both supply-side and demand-side explanations for the scarcity of bias analysis. On the demand side, journal reviewers and editors seldom request that authors address systematic error aside from listing them as limitations of their particular study. This listing is often accompanied by explanations for why the limitations should not pose much concern. On the supply side, methods for bias analysis receive little attention in most epidemiology curriculums, are often scattered throughout textbooks or absent from them altogether, and cannot be implemented easily using standard statistical computing software. Our objective in this text is to reduce these supply-side barriers, with the hope that demand for quantitative bias analysis will follow.

In many cases, successfully identifying value can make the difference between picking a winner and getting burned. The Value Connection offers a systematic and doable method investors can use to take advantage of value in the stock market. Based on author Marc Gerstein's "Value Connection" method, this book will show investors how to find potentially attractive value connections, analyze specific situations to see if the value connection is sound, buy the best value connected opportunities, and sell stocks for which the value connection has weakened. The proven four-step method outlined -- which allows investors to understand the relationship between a company and its stock -- will help any investor screen the stock market for the best values out there. Real world examples make understanding this revolutionary investing method easy. Marc H. Gerstein (New York, NY) is the Director of Investment Research at Multex.
