Undergraduate Manual of Clinical Cases in Paediatrics Nov 29 2019 Working up a 'case' for presentation to the examiner is an integral part of clinical learning. Case presentations give students an opportunity for applying the knowledge of diseases and the clinical skills for evaluation and management of a patient. This practical application (of theory and clinical skills) is tested in practical examinations on clinical subjects like paediatrics. This book helps enabling the logical application of theoretical knowledge and clinical skills in real life situations. This book contains details of several real cases which are common in this part of the world. Each case provides description in a standard format and answers to the questions commonly asked at various stages of case presentation. Important aspects of communication with parents/patients are given in every case, which will help in developing communication and counseling skills related to a particular disease or condition.
